NEW RHINOBOND METAL RETROFIT LITERATURE AVAILABLE FROM OMG

AGAWAM, Mass., April 2010 – A new brochure about using the RhinoBond System for metal retrofit applications is now available from OMG Roofing Products.

RhinoBond is an alternative installation method for thermoplastic single-ply systems that uses the same fastener and plate to secure the membrane and the insulation. In metal retrofit applications, the fasteners are installed into the purlins for maximum wind uplift resistance but they do not have to be placed in the seams of the membrane. Therefore, membrane width and orientation on the roof deck are not factors for this system, making installation easier.

The new six page brochure highlights the installation process using the RhinoBond Systems. In addition, it provides detailed information about installation productivity, insulation compatibility and the RhinoBond induction welding tool.

For a free copy, or additional information, contact your local OMG sales representative, visit www.RhinoBond.com or call (800) 633-3800.
